IoT RFID Inventory control software is written for automated RFID tracking of inventory levels, orders, sales, and deliveries to avoid both product overstock and shortages. Previously, inventory data was managed in hard-copy form or in managed spreadsheets. ICS allows for nearly complete automation of the supply line, including automated re-ordering of supplies, product expiration date management, automated documentation, multiple storage site management, and even predictive tools. The use of ICS allows for a smaller workforce, higher speeds and efficiencies, shorter customer wait times, just-in-time storage savings, and better warehouse organization.
