The global IoT RFID Printers market size is predicted to grow from US\$ 1053 million in 2025 to US\$ 1738 million in 2031; it is expected to grow at a CAGR of 8.7% from 2025 to 2031.

An RFID Printer is used to print specialized labels and tags containing RFID technology. These printers are capable of writing data into RFID chips embedded in smart labels or tags. Printers contain an RF encoder for the transmitting of data into chips and also must have full standard printing capabilities for subsequent barcodes, graphics or miscellaneous information needed on the tag or label.

According to our research, the number of global connected IoT devices was about 14 billion, grew by 18% compared to 2021. The data released by the Office of the Central Cyberspace Affairs Commission shows that, by the end of 2022, China has built and opened a total of 2.3 million 5G base stations. 110 cities across the country have reached the gigabit city construction standards. Gigabit optical network has the ability to cover more than 500 million households. IPv6 scale deployment application is deeply promoted. The number of active users exceeds 700 million, mobile network IPv6 traffic accounted for nearly 50%. The total size of China's data center racks exceeds 6.5 million standard racks, with an average annual growth rate of more than 30% in the past five years.
