The report requires updating with new data and is sent in 48 hours after order is placed.

The global IoT RFID Readers market size is predicted to grow from US$ 15960 million in 2025 to US$ 27880 million in 2031; it is expected to grow at a CAGR of 9.8% from 2025 to 2031.

The IoT RFID reader is a device that reads out the information in the tag, or writes the information that the tag needs to store into the tag. Depending on the structure and technology used, the RFID reader can be a read/write device, and the information control and processing center of the RFID system. When the RFID system works, the radio frequency identification reader transmits radio frequency energy in an area to form an electromagnetic field, and the size of the area depends on the transmission power. The tags in the coverage area of the reader are triggered, send the data stored in it, or modify the data stored in it according to the instruction of the reader, and can communicate with the computer network through the interface.

According to our research, the number of global connected IoT devices was about 14 billion, grew by 18% compared to 2021. The data released by the Office of the Central Cyberspace Affairs Commission shows that, by the end of 2022, China has built and opened a total of 2.3 million 5G base stations. 110 cities across the country have reached the gigabit city construction standards. Gigabit optical network has the ability to cover more than 500 million households. IPv6 scale deployment application is deeply promoted. The number of active users exceeds 700 million, mobile network IPv6 traffic accounted for nearly 50%. The total size of China's data center racks exceeds 6.5 million standard racks, with an average annual growth rate of more than 30% in the past five years.
