IoT Smart motion sensors are used in everything from phones and mobile devices, aircraft, toy drones and military drones, spacecraft, automobiles, robotics, gaming controllers, etc. Motion sensors are devices that detect a specific type of motion, for example rotation, translation, vibration, tilting, etc. Modern motion sensors come as tiny MEMs packages for soldering onto PCBs, and typically include multiple sensors for more than one axis. For example, a rotation sensor can measure rotation about the X, Y, and Z axes simultaneously. The current technological push for motion sensor MEMs is not just to pack as many different sensors and axes into one single package, but also include computational capabilities and complex mathematical formulas to fuse the various data of each sensor into a useful output.
