The global IP Based Nurse Call System market size is predicted to grow from US\$ 1372 million in 2025 to US\$ 2583 million in 2032; it is expected to grow at a CAGR of 9.6% from 2026 to 2032.

An IP-based nurse call system is a modern communication solution used in healthcare settings, enabling nurses and other healthcare staff to communicate efficiently with patients and among themselves through an internet protocol (IP) network. Unlike traditional nurse call systems, which may rely on analog or simple wired connections, IP-based systems use existing network infrastructure to transmit alerts and communication signals.

IP-based nurse call systems are typically used in hospitals, nursing homes, rehabilitation centers, and other healthcare facilities to enhance patient care and improve communication among staff members. The adoption of such systems reflects the broader trend of digitization and the use of technology in healthcare environments.

The global market for IP - based nurse call systems is experiencing significant growth and shows a promising future trend. The integration of IP - based nurse call systems with electronic health records (EHRs), mobile applications, and other healthcare IT solutions, as well as the adoption of advanced communication technologies such as voice over internet protocol (VoIP), wireless connectivity, and cloud - based solutions, have further fueled market growth. These technologies enable features like real - time location tracking and remote monitoring, improving patient outcomes, streamlining workflows, and maximizing operational efficiency.

The global population is aging, and the number of elderly people is increasing

significantly. Elderly patients often require more frequent medical attention and monitoring. IP - based nurse call systems can provide them with timely assistance, meeting their unique needs, thus driving market growth.

Patient safety is a top priority for healthcare facilities worldwide. IP - based nurse call systems can improve response times and communication between patients and healthcare providers, enhancing overall patient safety and satisfaction. This has led to an increasing demand for such systems.

North America is expected to dominate the market due to increasing awareness, favorable health reimbursement, and the strategic presence of industry players. Factors such as higher healthcare costs, lower caregiver - patient population ratios, and a growing elderly population are contributing to market growth.

Asia-Pacific is expected to grow significantly during the forecast period. This is attributed to its large geriatric population and the rising influx of patients in outpatient clinics and nursing homes. In emerging countries such as India and China, there has been a strong increase in healthcare expenditure. The number of hospitals is also on the rise, especially private hospitals, which are expected to spend more on infrastructure. This has led to a greater adoption of advanced nurse call systems, including IP - based ones.
