An IP Camera Board is a component used in the construction of IP (Internet Protocol) cameras. It typically consists of a circuit board with camera sensors, processors, and network connectivity components. IP camera boards are designed to capture and transmit video and sometimes audio data over an IP network, allowing for remote monitoring and surveillance.

IP Camera Boards are gaining traction due to their versatility and customization options. Market trends include a demand for smaller and more energy-efficient boards for IoT applications, improved low-light performance, and support for edge computing and AI processing on the camera board itself. DIY and niche markets are driving growth, and more user-friendly development tools are becoming available.
