## Abstracts

The global IP PA Intercom System market size is predicted to grow from US\$ 124 million in 2025 to US\$ 157 million in 2032; it is expected to grow at a CAGR of 2.9% from 2026 to 2032.

In 2025, global IP PA Intercom System production reached approximately 250 k units?with an average global market price of around US\$ 500 per unit, and a gross profit margin of approximately 10%-30%. An IP PA intercom system is a network-based communication platform that combines public address (paging/broadcast) and two-way intercom functions over IP/Ethernet infrastructure. It connects IP endpoints—such as paging speakers, horn speakers, intercom stations, gateways, and dispatcher consoles—so users can make targeted zone announcements, initiate push-to-talk or full-duplex conversations, and trigger emergency broadcasts with defined priorities. Most systems use standard VoIP technologies (often SIP) or proprietary IP protocols to transport audio, supporting unicast or multicast paging for efficient distribution to many endpoints. Compared with traditional analog PA, IP architectures enable centralized management, flexible zoning, remote configuration, and integration with other systems such as PBX/UC, access control, video surveillance, fire alarm/mass notification, SCADA/industrial alarms, and incident management workflows.

Upstream, the supply chain includes IP audio endpoints (intercom stations, IP speakers, paging adapters), network components (PoE switches, routers, cabling), audio electronics (DSP/codecs, amplifiers, microphones, speakers), embedded processors and firmware, power systems, and ruggedized enclosures for outdoor or industrial use. Midstream activities cover system and software engineering (call control, multicast paging, priority logic, monitoring), endpoint provisioning and security hardening, integration with SIP/PBX and building/industrial systems, project design (coverage,

zoning, QoS), installation and commissioning, and compliance testing for safety, emergency use, and cybersecurity requirements. Downstream demand is driven by AV/telecom integrators, security contractors, and industrial automation firms delivering solutions to end users in manufacturing, transportation, utilities, commercial buildings, and public safety; aftermarket revenue typically comes from software maintenance, device management licenses, spares, firmware updates, network expansions, and retrofits that migrate legacy analog PA to IP while preserving existing loudspeakers through gateways.

United States market for IP PA Intercom System is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
