An acronym for Internet Protocol Virtual Private Network, IPVPN is separated from the public internet, travelling via a private connection to each remote site. IPVPN also provides a high level of flexibility. VPN is a networking technology that allows users to connect to their main network remotely via the public internet. A VPN allows employees to work from home and connect to the company's intranet, giving them access to the shared files of their office computers. An IP VPN works in much the same way,

establishing seamless connectivity to the main network across an ISP. However, it also uses multiprotocol label switching (MPLS) technology to prioritize internet traffic and avoid public gateway to increase security.
