IPL photon skin rejuvenation instrument is an advanced high-tech beauty project. It uses colorful full-spectrum strong light to directly irradiate the skin surface. It can penetrate deep into the skin, selectively act on subcutaneous pigments or blood vessels, and decompose pigmentation. Closes abnormal red blood cells and relieves various blemishes on the skin. At the same time, photons can stimulate the proliferation of subcutaneous collagen and reorganize the original collagen tissue, thereby shrinking pores, reducing wrinkles, and restoring elasticity, health and luster to the skin.
