IPS is a panel technology used in LCDs (liquid-crystal displays), including many computer monitors and phones. It stands for “in-plane switching.” Today, IPS technology is more commonly found in higher-end screens, although some inexpensive monitors with IPS panels also exist. Photographers, artists, and graphic designers often prefer these monitors because – among other reasons – they give consistent colors at a wide range of viewing angles. They also allow for more accurate color reproduction in the first place. Often, you will see monitors with IPS panels referred to as simply “IPS monitors.”
