An IQ mixer module (Connectorized) is a pre-assembled electronic component that integrates the functionality of an in-phase and quadrature (I/Q) mixer. This module typically includes one or more mixer chips, power management circuits, control interfaces, and connector interfaces. It allows users to input signals through external connectors, and the module then outputs the corresponding I and Q signals. This modular design simplifies and enhances the flexibility of using IQ mixers, as it eliminates the need for users to design and assemble circuit boards themselves. Additionally, since the module has been tested and calibrated, it ensures stable and reliable performance.
