Abstracts

The global IQF Freezing Papaya market size is predicted to grow from US$ 186 million in 2025 to US$ 263 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

IQF Freezing Papaya refers to papaya cubes, slices and strips that are individually quick frozen after peeling, deseeding and cutting mature fruit. The IQF process rapidly reduces the fruit's temperature, preserving cellular integrity and maintaining natural color, aroma, flavor and nutritional content. IQF papaya remains free flowing during frozen storage, offering precise portioning, easy formulation and minimal thawing losses, which makes it suitable for continuous industrial processing. The product is available in various standardized cut sizes to meet different downstream requirements.

Compared with conventionally block frozen papaya, IQF papaya maintains better piece integrity and flowability after thawing, making it ideal for smoothies, frozen fruit blends, bakery and dessert applications, foodservice operations, ready to eat healthy foods and frozen meal production. Major production clusters are located in Thailand, Vietnam, the Philippines, Mexico and Brazil, supported by strong tropical fruit plantations and mature cold chain infrastructure, forming an export oriented supply system for the global food industry.

Based on industry databases, export statistics from major producing countries and validated processor inputs, global IQF papaya production in 2024 is estimated at 0.10–0.16 million tons, reflecting variations in raw material availability, ripeness management and cold chain infrastructure. The weighted average FOB price generally ranges from USD 1,150 to 1,650 per ton.

United States market for IQF Freezing Papaya is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
