The global Ir-Cut Filter market size is predicted to grow from US\$ 1065 million in 2025 to US\$ 1356 million in 2032; it is expected to grow at a CAGR of 3.6% from 2026 to 2032.

In 2025, global Ir-Cut Filter production reached approximately 6.5 billion units, with an average global market price of around US\$167 per thousand units. An IR-Cut filter, also known as a night vision filter or a cut-off filter, is a type of filter used in cameras and imaging devices to block infrared light while allowing visible light to pass through. This is important for improving the quality of images captured in low-light conditions or for reducing infrared contamination in images. The gross margin of IR-cut filters (used in cameras, smartphones, and other imaging devices to block infrared light) typically ranges from 25% to 40%, depending on manufacturer, technology level, and application.

The global IR-Cut filter market has experienced significant growth due to the increasing demand for high-quality imaging in various applications, including mobile phones, digital cameras, security cameras, and automotive cameras. With the trend towards higher resolution cameras, especially in smartphones, the demand for IR-Cut filters with better performance characteristics is rising. As artificial intelligence (AI) and machine learning are increasingly integrated into imaging systems, there is a growing need for high-quality IR-Cut filters to support these advanced functionalities. There is an increasing emphasis on using environmentally friendly materials and sustainable production processes to manufacture IR-Cut filters. The rise in the production of smartphones and tablets, which often include high-resolution cameras, has been a major driver for the IR-Cut filter market. The expansion of security and surveillance systems, both in public and private sectors, has also driven the demand for IR-Cut filters. The growing adoption of advanced driver-assistance systems (ADAS) and the use of cameras in autonomous vehicles require high-quality IR-Cut filters for optimal performance. The market is

dominated by several key players who have established strong positions through innovation, product quality, and brand recognition. These players include companies like Asahi Glass, Hoya, and Schott. New entrants face barriers to entry due to the need for significant capital investment, advanced manufacturing techniques, and technical expertise. Asia-Pacific is the largest market for IR-Cut filters due to the presence of major smartphone manufacturers and the rapid adoption of advanced imaging technologies. The market in North America is driven by the presence of high-tech companies and the adoption of security and surveillance systems. Europe also contributes significantly to the market, with a focus on automotive applications and advanced security systems. Overall, the IR-Cut filter market is expected to continue growing, driven by technological advancements and the increasing use of imaging devices across various industries. However, companies will need to innovate and adapt to changing market dynamics to maintain their competitive edge. The IR-cut filter (infrared-cut filter) industry occupies a key position in the imaging and optical components value chain, serving as an essential element in cameras, smartphones, security systems, automotive vision, and industrial imaging devices by blocking unwanted infrared light while allowing visible wavelengths to pass. Upstream, the industry depends on high-quality optical glass substrates, thin-film deposition materials (such as metal oxides), adhesives, and precision cutting and polishing equipment. Midstream consists of filter manufacturers who apply multi-layer coatings using vacuum deposition, sputtering, or other advanced optical coating techniques, followed by precision dicing and assembly. Downstream, IR-cut filters are integrated into consumer electronics, CCTV cameras, machine vision systems, smartphones, drones, and automotive vision modules, which are all experiencing rapidly increasing demand due to higher image quality expectations and proliferation of smart devices. Growth opportunities in the industry are driven by several trends: the expansion of smartphone cameras and multi-camera systems, growing adoption in automotive ADAS and autonomous vehicles, increasing use in industrial machine vision, and rising demand for high-performance security and surveillance cameras. Technological advancements, such as higher transmission efficiency, reduced reflection, and miniaturized filter designs compatible with compact lens modules, create further business opportunities for suppliers with expertise in thin-film optical coatings and precision manufacturing. Additionally, the shift toward customized filters for AI imaging and low-light applications allows manufacturers to capture higher margins, while the ongoing growth of global imaging markets ensures sustained demand for IR-cut filter solutions.
