Iridium sputtering target has the same properties as Iridium metal. Iridium is a rare, hard, lustrous, brittle, very dense platinum-like metal. Chemically it is almost as unreactive as gold. It is the most corrosion-resistant metal known and it resists attack by any acid. Iridium is generally credited with being the second densest element (after osmium) based on measured density, although calculations involving the space lattices of the elements show that iridium is denser. Iridium is a rare metal belonging to the platinum group of elements on the Periodic Table.
