Iris scissors are a type of scissors with short blades that was originally developed for ophthalmic surgery. They are alternatively referred to as Iris forceps in the United Kingdom and Asia. Iris scissors are also available in the crafting market and are sometimes used for the production of fabric-related goods. Both closed and open shank versions are available.

An iris forceps is a medical device used in ophthalmic surgery and other medical procedures that require precise cutting of eye tissue. These scissors get their name from their purpose: The iris is the colored ring-shaped structure of the eye, and iris forceps are often used to cut or manipulate iris tissue during eye surgery. Iris pliers are usually made of stainless steel, and they have two small, sharp scissor arms. The design of the scissors makes it suitable for precise cutting of eye tissue in a small area, especially in eye surgery, such as cataract surgery or the treatment of other eye diseases.
