Amorphous strip is a new type of soft magnetic alloy material. It uses internationally advanced ultra-quick cooling technology to directly cool the molten metal at a rate of millions degrees per second to form an amorphous thin strip with a thickness of 25-35 μm to obtain the combination of amorphous alloy structure with short-range order and long-range disorder in atomic arrangement, which is completely different from traditional metals and alloy materials in microstructure. Therefore, in terms of physical properties, chemical properties, mechanical properties and many other aspects, it has unparalleled excellent characteristics comparing with traditional metal materials. In addition, the preparation process is completely different from the traditional metallurgical process. The amorphous ribbon is made from molten steel in one step, eliminating the need for multiple processes such as casting, forging, intermediate annealing, and rolling in the traditional metallurgical process. With saving a lot of energy and no emissions of pollutants, amorphous alloy is known as a new green material with environmental protection, energy saving and high efficiency.
