The global Iron-based Flow Battery market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Iron-based liquid flow batteries are energy storage batteries that can convert electrical energy into chemical energy for storage, and then convert chemical energy into electrical energy for release when needed. Iron-based liquid flow batteries balance the load of the power grid by storing electrical energy, and release the stored electrical energy during peak energy demand periods, thereby providing a stable power supply for the power system. Therefore, iron-based liquid flow batteries play an important role in achieving a smooth power supply from renewable energy and improving the stability of the power grid. The price of an all-iron liquid flow battery will be 1/3 of that of an all-vanadium liquid flow battery, which can significantly reduce the cost of current liquid flow batteries. The all-iron liquid flow battery uses neutral ferrous chloride as the active material. It is low-cost, environmentally friendly, has high energy density, and has obvious resource advantages. It can meet the needs of large-scale, long-term energy storage at the future grid level and is beginning to stand out.

United States market for Iron-based Flow Battery is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Iron-based Flow Battery is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Iron-based Flow Battery is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key Iron-based Flow Battery players cover VoltStorage GmbH, Form Energy, Electric Fuel Energy (EFE), ESS Tech, Shanghai Electric, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
