Iron core motor module is an important type of linear motor module, widely used in various automation equipment and systems that require high precision and high load capacity. The iron core motor module is usually composed of components such as stator, rotor, guide rail, sensor, etc. Among them, the stator is fixed and stationary, while the rotor slides on the guide rail, achieving linear motion through the principle of electromagnetic induction. The presence of iron cores enhances the strength of the electromagnetic field, thereby improving the efficiency and load capacity of the motor.
