The iron ore crusher is a kind of mechanical equipment that crushes the iron ore ore in a stepwise manner, from a large piece of raw iron ore (about 500mm) to a millimeter-scale fine material, usually using iron ore dry selection. The machine enriches the lean ore, sends the enriched iron ore rich ore to the ball mill for grinding, and then separates and extracts the iron fine powder by wet selection.

In the iron ore crushing process, the feeding machine, the head breaking, the second breaking, the screening, the fine crushing and the dry sorting are generally used. For the sake of economy, the finer ore size usually entering the dry sorting machine, the iron ore is included. The higher the proportion of stone is selected.
