Iron removal equipment are devices that remove iron from well water. Chemicals are used to oxidize and extract the iron contained in the water, and the filtered well water can be used as drinking water or domestic water.

Iron removal equipment allows a wide range of uses for well water, including general drinking water, miscellaneous water, and industrial water. In cases where well water cannot be used due to high iron concentrations, iron removal equipment can be installed between the well pump and indoor piping to make the water even safer to use.

The global Iron Removal Equipment market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
