An irreversible temperature indicator label is a type of temperature monitoring device that provides visual evidence of whether a particular temperature threshold has been exceeded. These labels contain heat-sensitive materials that undergo a permanent change, such as a color change, when exposed to temperatures beyond a certain point. Once activated, the change is irreversible, providing a clear indication that the monitored temperature limit has been surpassed. Irreversible temperature indicator labels are commonly used in various industries, including food and pharmaceuticals, to ensure product quality and safety during transportation, storage, and handling, by alerting users to temperature excursions that could compromise product integrity.
