According to this study, the global Irritable Bowel Syndrome (IBS) Diagnostics market size will reach US\$ million by 2031.

Irritable bowel syndrome (IBS) is defined as a gastro-intestinal disorder causing discomfort in the stomach, along with diarrhea, and constipation. IBS can develop after a severe session of diarrhea (gastroenteritis) caused by bacteria or a virus. IBS might also be associated with a surplus of bacteria in the bowels (bacterial overgrowth). People exposed to stressful events, especially in childhood, tend to have more symptoms of IBS. IBS diagnostics is done through medical history, physical exam, and imaging tests. However, IBS is majorly diagnosed by lactose intolerance tests, breath test for bacterial overgrowth, blood test, and stool test. The tests are done based on symptoms such as constipation-predominant, diarrhea-predominant, or mixed. It can also detect by various imaging tests such as CT Scan or X-ray, upper endoscopy, and colonoscopy.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs.
