The global ISO Flat Rack Containers market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

ISO Flat Rack Containers are a specific type of shipping container that is designed with collapsible sides, allowing for easy loading and unloading of oversized or bulky cargo. They are commonly used for transporting heavy or oversized items that cannot fit into standard containers.

ISO Flat Rack Containers are often used to transport heavy machinery, vehicles, construction equipment, large pipes, steel coils, timber, and other bulky or irregularly shaped cargo. The lack of restrictions on cargo height or width makes them suitable for transporting oversized items. Flat rack containers can be loaded from the sides using cranes or forklifts. Cargo can also be secured using lashing points and additional supports, such as straps or chains, to ensure safe transportation.
