The research report highlights the growth potential of the global Isobornyl Acrylate market. Isobornyl Acrylate are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Isobornyl Acrylate. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Isobornyl Acrylate market.

Isobornyl acrylate is a monofunctional acrylic monomer that can be polymerised by free radicals. Isobornyl Acrylate is used as an intermediate product for polymer synthesis in the chemical industry. In particular it is used in UV and EB cured coatings, inks, and adhesives because of desirable properties, such as excellent adhesion, excellent water resistance, and good scratch resistance.

Exposure to this chemical substance is very limited. Consumer risk and exposure is unlikely as isobornyl acrylate is manufactured and handled in industrial settings only. Isobornyl Acrylate should not enter surface water, groundwater and soil. General and substance specific operational conditions and risk management measures are in place to prevent exposure to workers and release to the environment.

As isobornyl methacrylate (IBOMA) has the similar properties, applications, and

synthesis technology with isobornyl acrylate (IBOA), so in this report, isobornyl methacrylate was counted, and the comparison between isobornyl acrylate and isobornyl methacrylate has also been made.

End-Users of Isobornyl Acrylate can be segmented into: Resin Synthesis, Reactive Diluent and Others. In 2019, Resin Synthesis segment occupied the most market share, of about 80% sales volume in global market. Asia-Pacific is the largest production as well as consumption region of Isobornyl Acrylate. In 2019, APAC took a sales share of about 59%, Europe and North America followed with about 22% and about 14%.
