Isobutenyl-based thermoplastic elastomer is a fully saturated styrene-isobutene block (SIBS) copolymer. It is a unique material that combines the properties of plastic and rubber. SIBS consists of three fragments: a styrene intermediate block sandwiched between two isobutylene blocks. Styrene intermediate blocks provide rigidity and strength, while isobutene blocks provide flexibility and elastic properties. SIBS polymers are known for their excellent transparency, low gas permeability, good mechanical properties and biocompatibility.
