Isodecyl diphenyl phosphate is an organophosphate flame-retardant plasticizer, abbreviated as DPDP, with CAS No. 29761-21-5. It is typically a low-viscosity liquid and provides flame retardancy, plasticization, flexibility modification, low volatility, and improved processing performance. It is a phosphate ester product with both functional additive and plasticizing additive properties.

The upstream of the isodecyl diphenyl phosphate industry chain mainly includes phenol, isodecyl alcohol, phosphorus oxychloride, catalysts, and refining auxiliaries. The midstream consists of fine chemical manufacturers producing standard and low-TPP grades through esterification, deacidification, refining, and quality control. Downstream applications mainly include flame-retardant plasticizers, PVC products, rubber elastomers, coating materials, adhesive and sealant materials, and other fields. Product value is concentrated in impurity control, flame-retardant and plasticizing synergy, low volatility, and formulation compatibility.
