## Abstracts

The global Isolated Bus Transceiver market size is predicted to grow from US\$ 866 million in 2025 to US\$ 1251 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Isolated bus transceivers are key components used in industrial communication systems. They allow reliable data transmission between equipment in different electrical locations, while providing electrical isolation to prevent interference and increase the safety of the system. These devices are typically used for fieldbus communications such as Profibus, Modbus, CAN, etc. As the demand for higher-speed data transmission in industrial communications increases, future isolated bus transceivers may support higher data rates to accommodate the development of industrial automation systems. With the emphasis on industrial system security, future isolated bus transceivers may have enhanced security features to prevent network attacks and illegal access.
