The global Isopentane market size is predicted to grow from US\$ 165 million in 2025 to US\$ 198 million in 2031; it is expected to grow at a CAGR of 3.1% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Pentane is colourless with a very low odour and high volatility thanks to its low, narrow boiling range ? it is among the lowest boiling hydrocarbon liquids and so evaporates at a very high rate. It is used principally as a blowing agent in foam production, as a propellant in aerosols and as reaction media for polymerisation processes.

Pentane is a low-cost blowing agent. Over the past few decades, the technology and development of mixed pentane have not developed by leaps and bounds. In the Asia-Pacific region, EPS is growing faster. The EPS industry in the US and Europe is already quite stable.
