The global Isopropanol market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Isopropanol is a colourless, flammable liquid and a low-cost solvent. This solvent finds innumerable applications in many industries such as cosmetics, pharmaceutical, paints & coatings, cleaning, etc. It is used to create many other compounds such as isopropyl amines, isopropyl esters and derivative ketones among others.

To meet the increasing demand for multifunctional cosmetic and personal care products, chemical companies are working on developing new chemicals to meet the growing demand for ingredients required by the cosmetic and personal care industry. This will lead to an increase in the use of isopropyl alcohol which is used as a solvent during the manufacturing process of cosmetic and personal care products. Since isopropyl alcohol is miscible with non-polar solvents as well as water, it is widely used in cleaning agents. This is yet another factor driving the growth of the isopropyl alcohol market.
