The global Isopropylethyl Thiourethane market size is predicted to grow from US$ 83.4 million in 2025 to US$ 100 million in 2031; it is expected to grow at a CAGR of 3.0% from 2025 to 2031.

Isopropylethylthiocarbamate is a light yellow to orange-red oily liquid with a specific gravity slightly lower than that of water. It is an excellent collector for non-ferrous metal sulfide ores, and is very effective for preferential flotation of copper from ores containing chalcopyrite and pyrite.

China's copper ore industry is a downstream-driven and resource-dependent industry. After mining, washing, and smelting, copper ore is processed into various copper rods, copper rods, copper strips, copper pipes, copper foils and other copper materials. It is widely used in social production and residents' consumption. Driven by the rigid demand for copper in downstream applications, the overall operation of China's copper ore industry is good. In the future, with the rapid rise of new energy vehicles, lithium battery anode materials will continue to drive the demand for copper ore, and China's copper ore market will further expand its dependence on foreign countries. Through the 'Belt and Road Initiative', Chinese copper mining companies will gain more opportunities for international cooperation and greatly expand the territory of China's overseas copper ore resources. At present, the investment hotspots of Chinese copper mining enterprises are concentrated in Africa, South Africa and other regions. In the future, with the deepening of the 'Belt and Road' strategic layout, the layout of copper ore resources in Africa by Chinese copper mining enterprises will become the focus.Isopropyl ethyl thiocarbamate is an excellent collector for non-ferrous metal sulfide ores. characterized by good selectivity, less dosage and less pollution. It is very effective for the preferential flotation of copper in ores containing chalcopyrite and pyrite, and it can also get good results for the separation of zinc and sulfur. For molybdenum sulfide, lead sulfide, zinc sulfide, copper sulfide and other ores, it has excellent selectivity and special separation effect.
