Isothermal liquid nitrogen freezers are built with patented jacket technology designed to provide with superior sample integrity. LN2 is stored in the jacketed space that surrounds the chamber, so the storage area is completely dry and has industry-leading temperature uniformity. The great advantage of this type of LN2 freezers is the fact that samples are stored at liquid nitrogen temperatures without liquid nitrogen contact. These freezers have a double wall which contains the liquid nitrogen. The nitrogen vapour is then continuously circulated inside the tank through little holes at the top, guaranteeing a superb temperature uniformity of around -190°C throughout the inner tank.
