The global Isothermal Nucleic Acid Amplification market size is predicted to grow from US\$ 665 million in 2025 to US\$ 1203 million in 2031; it is expected to grow at a CAGR of 10.4% from 2025 to 2031.

Isothermal nucleic acid amplification is referred to isothermal nucleic acid amplification technology. And in this report, we get the statistics on reagents used in isothermal nucleic acid amplification technology. Nucleic acid isothermal amplification is a newer technique that amplifies DNA or RNA specific fragment from few copies to billion-fold copies under a one temperature condition, unlike PCR amplification that needs at least 30-35 thermal cycles to accomplish the reaction.

Currently, some companies in the world can produce isothermal nucleic acid amplification product, mainly concentrating in North America and Europe. The main market players are PreAnalytiX, Meridian Bioscience, Eiken Chemical, Lucigen, OptiGene, etc.
