Isotopic labeling is a technique which identifies drug products and detects counterfeits. Over the globe, pharmaceutical companies face a major problem of drug counterfeit, and the adoption of isotope-labeled excipients helps in reducing such products which are either manufactured with no active pharmaceutical ingredients (API), wrong API, or an incorrect amount of API. Counterfeiting issues are a major concern in the pharmaceutical market owing to poor regulatory scenario, a high number of intermediaries, and lack of awareness among end users.
