The global IVD Lyophilized Reagent market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

IVD is the abbreviation of ?in vitro diagnostics?, and lyophilized reagents usually refer to freeze-dried in vitro diagnostic reagents. These reagents are commonly used in areas such as clinical diagnosis, disease monitoring, and treatment monitoring. One of the advantages of lyophilized reagents is that they are relatively stable, easy to store and transport, and can be stored for long periods of time without losing activity. This makes them very popular in clinical laboratories as reagent waste and frequent re-preparation can be reduced. In the field of in vitro diagnostics, lyophilized reagents can be of various types, including enzymes, antibodies, antigens, nucleic acids, etc., used to detect various disease markers or biomolecules. Common applications include hematology, immunology, microbiology and other fields.
