The global IVD Reagent Freeze-drying Service market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The fact that lyophilized products can be transported and stored at room temperature is the main reason why it attracts the attention of the molecular diagnostic industry. Since the biological reagents used in molecular diagnostic experiments contain biologically active ingredients (various enzymes and nucleic acid samples, etc.), in order to ensure that the reagents are transported during transportation There will be no performance degradation. Traditional nucleic acid detection kits have strict requirements for the transportation of reagents. They usually use dry ice or chemical ice to maintain the transportation temperature at around -20°C.
