The global IWB Holsters market size is predicted to grow from US\$ 2945 million in 2025 to US\$ 3763 million in 2032; it is expected to grow at a CAGR of 3.6% from 2026 to 2032.

An Inside-the-Waistband (IWB) holster is a type of handgun holster designed to be worn inside the waistband of pants or shorts, typically positioned between the wearer's body and their clothing. In 2024, global IWB Holsters production reached approximately 55673 k units, with an average global market price of around US\$ 52 per unit. The production capacity of IWB Holsters reaches 61859 k units, and the industry's gross profit margin is approximately between 30% and 50%.

Market demand for IWB holsters is primarily driven by the growing global trend toward legalized concealed carry, heightened personal safety awareness, and increased gun ownership. As more regions implement relaxed policies, allowing citizens to carry concealed handguns without a license, consumer demand for comfortable, reliable, and highly concealed everyday carry equipment has surged. At the same time, modern urban life and workplace environments require that defense equipment must be effectively covered by ordinary clothing, and IWB holsters have become the first choice due to their close fit and easy concealment. In addition, advances in material science and ergonomic design have significantly improved the wearing comfort, stability, and consistency of holsters, further promoting their popularity and upgrading in the civilian defense market.
