The global IXPP Foam Materials market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The main raw materials of IXPP are polypropylene resin (PP) and other special fillers, supplemented by auxiliary materials such as foaming agent. After melt mixing and extrusion molding, it is irradiated with radiation processing technology for green and healthy ion radiation cross-linking, and then continuously foamed at high temperature to form foam products. IXPP foam is a functional polymer foaming material that meets international environmental standards. It has good thermal stability (the maximum operating temperature can reach 130°C), high toughness, tensile strength, impact strength and other excellent properties.

United States market for IXPP Foam Materials is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
