According to our (LP Info Research) latest study, the global Jacing Oil System market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Jacing Oil System is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Jacing Oil System market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Jacing Oil System are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Jacing Oil System. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Jacing Oil System market.

With the increasing capacity of the turbine generator set and the increasing weight of the rotor, a single lubricant can no longer meet the needs of continuous coiling. In order to reduce the rotor rotational torque and avoid the wear of the shaft tiles, large turbine generator sets generally increase the large shaft jacking system, which can make the rotor rotate stably when the top shaft oil system is opened for continuous coiling.
