Jacketed plug valve is a specially designed valve with an additional jacket on the outside of the valve body. The function of the jacket is that by passing heating or cooling media (such as steam, hot water, cold water or hot oil, etc.) through it, the temperature of the medium flowing through the inside of the valve can be controlled to meet specific process requirements. This type of valve is often used in working conditions where the temperature of the medium needs to be kept stable or adjusted, such as in the petrochemical and fine chemical industries.

The global Jacketed Plug Valve market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.

The jacketed plug valve is a unique valve in the industrial field. Based on the conventional plug valve, an additional layer of jacket structure is added to the outside of the valve body. This design endows the jacketed plug valve with excellent temperature regulation ability. By passing different media into the jacket, such as steam for heating and cold water for cooling, it can precisely control the temperature of the medium flowing through the valve and meet the strict temperature requirements in the production process. It has a compact structure, simple operation and good sealing performance.
