Jail Information Management System (JIMS) is a software application used by correctional facilities to manage and track inmate information. It is designed to streamline and automate various processes related to inmate management, including booking, intake, classification, housing, medical records, visitation, and release.

JIMS allows correctional staff to input and access inmate data, such as personal information, charges, court dates, and disciplinary records, in a centralized database. It also enables staff to generate reports, track inmate movements within the facility, and monitor inmate behavior and activities.

The system helps improve efficiency and accuracy in managing inmate information, reduces paperwork, and enhances communication and collaboration among different departments within the correctional facility. It also provides a secure and auditable platform for storing and retrieving inmate records.

JIMS may also integrate with other systems, such as fingerprint identification systems, mugshot databases, and court case management systems, to facilitate data sharing and streamline processes across different agencies involved in the criminal justice system.
