Epidemic encephalitis (JE) is a disease spreads through mosquito bites. Symptoms usually take 5-15 days to develop and include fever, headache, vomiting, confusion, and difficulty moving. The major form of the disease is encephalitis, and less severe forms such as aseptic meningitis or simple fever syndrome with headache are also frequent. The mortality rate of Japanese encephalitis is high, and sequelae are very common, especially among children (up to 50%). Prevention is possible through the use of inactivated vaccines.
