Jaundice phototherapy lamp is a medical device used to treat newborn babies with jaundice. Jaundice is a condition in which a baby's skin and eyes may appear yellow due to high levels of bilirubin in the blood. Phototherapy involves exposing the baby's skin to a special type of light that helps to break down the bilirubin and reduce its levels in the blood. The phototherapy lamp emits a specific wavelength of light that is absorbed by the bilirubin, causing it to be converted into a form that can be easily excreted by the baby's body. Currently, the typical models of Jaundice phototherapy lamp include Draeger's BiliLux series, GE's Lullaby series, Atom Medical's BILI series, etc.
