The Jet board was an early powered longboard surfboard. It is one of the earliest, if not the earliest motorized surfboard, produced from 1965 to 1968. The original designer was a former engineer from Boeing Aircraft. It was designed to use an aircraft trim tab roller control with your foot for acceleration. There was a simple ingenious safety OFF switch, using a magnet that connected two electrical terminals across a point, located close by the engine's surface watertight hatch. The rider would attach a strap to his ankle with a flexible wire line to the magnet. When he fell off, it would stop the engine.
