The report requires updating with new data and is sent in 48 hours after order is placed.

Jet Cookers work by internal parts precisely mixing measured amounts of steam directly into a liquid or slurry. This instantaneous transfers heat from steam to liquid. Through the process of the steam condensing, this completely eliminates steam hammer and vibrations which causes a turbulent mixing action that self-cleans the unit. The two things that make Jet Cookers better than other heaters is the distinct use of internal modulation and choked flow.
