Jet Mud Mixer is a device used in conjunction with the solid control equipment for oil drilling. It is mainly employed for preparing and thickening the drilling fluid. By combining with the Venturi tube and the jet nozzle, and with the cooperation of components such as the mixing funnel and the sand pump, it injects materials like bentonite and barite powder, as well as chemical additives, into the device. The materials are then fully sheared, dispersed, and mixed within the pipe before entering the circulation tank. This process alters the density, viscosity, and water loss characteristics of the drilling fluid, meeting the performance requirements of the drilling process. It is often used in combination with a shear pump to enhance the effect.

United States market for Jet Mud Mixer is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
