Abstracts

The global JFET Transistor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Field Effect Transistor (FET) is a form of transistor, having three terminals of semiconductor namely drain, gate and source. Also known as uni-polar transistor. There is a flow of electrons from source to drain which is done by passing electricity from gate and source terminals.

Factors which can be a restraint for the market is FETs get damaged due to stationary electricity and high input impedance of FET amplifiers results in frequency response. Nevertheless, FETs get less effected by radiation compare with other transistors and also it produces less noise, which will bring new opportunities in the market in coming years.
