Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Sawtooth wave jig is revised and manufactured, based on the stratified theory and the adequate analysis of other conventional jigs. The jiggling pulsation curve—produced by sawtooth wave jig—is in the shape of sawtooth wave which makes upward water flow quicker than downward water flow. The feature that upward time is shorter than downward time solves the problem that time and action of upward/downward water flows. This breakthrough dramatically amplifies the loose degree and mitigates suction action, which facilitates precipitation of coarse ores and improves ore recovery rate. Both jigs and fixtures are used in manufacturing. If you want to produce interchangeable parts, you will need to use a jig, fixture, or both depending on the operation. Human error is vastly limited, so components can be machined quickly with high levels of accuracy, which reduces costs. Jigs are a type of fixture that guides and supports a tool, whereas a fixture is used to secure a workpiece to be worked on.

According to this study, over the next five years the Jig market will register a xx% CAGR in terms of revenue, the global market size will reach US\$ xx million by 2023, from US\$ xx million in 2017.
