However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Jigs. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Jigs market.

A jig is a type of custom-made tool used to control the location and/or motion of parts or other tools.

Both jigs and fixtures are used in manufacturing. If you want to produce interchangeable parts, you will need to use a jig, fixture, or both depending on the operation. Human error is vastly limited, so components can be machined quickly with high levels of accuracy, which reduces costs. Jigs are a type of fixture that guides and supports a tool, whereas a fixture is used to secure a workpiece to be worked on.
