A joint bandage, also known as a joint wrap or a support bandage, is a medical or sports-related product designed to provide support, compression, and stabilization to a joint, typically in the areas of the ankles, knees, elbows, wrists, or other joints that may require extra support due to injury, strain, or preventive measures during physical activities. Joint bandages are commonly used in both medical and sports contexts to help manage discomfort, reduce swelling, and provide stability to the affected joint.

Manufacturers were exploring innovative materials that offer better elasticity, breathability, moisture-wicking properties, and durability. These materials enhance the overall comfort and performance of joint bandages, especially during prolonged use.
