Juice Vacuum Degasser is a food processing equipment used to remove dissolved oxygen and bubbles from juice. It reduces the pressure in the tank by vacuuming, allowing oxygen, nitrogen and other gases to escape from the juice, thereby extending the shelf life, preventing oxidation and discoloration, and maintaining flavor and nutrients. The equipment usually consists of a vacuum pump, a degassing tank, a control system, etc. It is suitable for the pretreatment of heat-sensitive juices such as orange juice and apple juice, and can be integrated with other systems (such as pasteurization and filling lines).
